

CELEBRATING WORLD OCEAN'S DAY

SPREADING AWARENESS

- An estimated 8 million tons of plastic enter our oceans every year.
- We've made more plastic in the past 10 years than in the last century.
- Over 100,000 marine animals die every year from plastic entanglement and ingestion.
- Over the next 20 years, scientists estimate that about 70 to 90% of all coral reefs will disappear primarily due to warming ocean waters, ocean acidity, and pollution.
